

Enterprise discovery and recurring operational capacity

Company-wide opportunity discovery, delivery and adoption across process, data and controls.

200+ use cases / approx. 30,000 annual hours

Opportunity pipeline identified across the estate
An identified opportunity, not a measured result.

10,000 annual hours

Annual operational capacity released by three delivered initiatives
The programme released capacity; the client retained decisions on how that capacity was deployed.

The operational challenge

- Manual work and fragmented data submission existed across multiple corporate and customer functions.
- The organisation needed both a prioritised pipeline and practical adoption support.

What Leania delivered

- Filtered more than 200 use cases for suitability, value and priority.
- Delivered OCR, automated data checks and submission reminders.
- Shifted data receipt from email towards secure FTP.

Outcome

- The wider 30,000-hour figure was an identified opportunity pipeline.
- Three specified initiatives totalled 10,000 reported annual hours of capacity release.
